

§ 7051(7) (p 5)

“Dispatch Center” means a physical facility that provides work stations for people to receive and send electronic messages by radio, cellular , telephone, or other IP means to designated public safety entities. there are three types;

(a) State Dispatch Centers: Call takers receive calls via the 9-1-1 or 888 network from people identified as being in a “dispatchable location”requiring emergency assistance and transfer pertinent information received to agencies able to provide police, fire, or emergency medical services. They are also known as Public Safety Answering Points (PSAPS)

(b) Regional Dispatch Centers: Receive information from State Dispatch centers, public safety service providers, or the general public and send messages to appropriate agencies within a defined geographical area to respond with needed services. They are managed by local processes.

(c) Regional Dispatch and 9-1-1 Centers provide both services

§ (11) p 6 “Emergency dispatch System” means *an integrated telecommunications system including* the IP infrastructure, and personnel, by which State and Regional Dispatch facilities receive and send information to emergency response services from police, fire, emergency medical services , public safety services or other designated providers of emergency response services.

§ 7053 (a) (1) (p 10) (1) The infrastructure and operational standards for State Dispatch Centers.

§ 7054 (2) (A) add “operational” before word “protocols”

§ 7063(4)(a) page 22 Change “ E-911 Board” to” Emergency Communications Board”

§ D (1) (A) page 25 *Should this provision be limited to Regional dispatch Centers*
